

Wild Bird Repellent

Soil Enhancement

COST EFFECTIVE

LUMI both deters wild birds and enriches the soil in the contact area by assisting in sequestering nitrogen, phosphorus, and other concentrated nutrients.

REPELS WITHOUT HARM

LUMI repels wild birds from entering the vicinity where the product is applied by creating an environment that is uncomfortable. The animals simply want to stay away.

EASY APPLICATION

Apply product to water as directed and spray using an agricultural pump sprayer or electrostatic sprayer. Lasts up to 90 days, depending on precipitation levels.

LUMI is a versatile blend of organic-compliant microbes and natural extracts designed to deter wild birds from accessing the outdoor areas where it is applied. Additionally, it enhances the quality of the soil in the treated vicinity.

Wild Bird Repellent Soil Probiotic

LUMI is a diverse complex of microbes and natural extracts that repels wild birds from entering the vicinity where the product is applied. It also offers the other benefit of improving the soil in the contact area.

LUMI creates an environment that wild animals find uncomfortable, so they simply stay away. The product is compliant with the national organic program of the USDA.

Bioluminescent Effect on Avian Eyes

LUMI contains microbes that create a bioluminescent effect on the avian eye. The bioluminescent effect alters the light reflectance spectra and disrupts the depth perception of birds attempting to land. Use of the product does not harm birds' vision, rather it makes landing difficult, causing the birds to look for a more inviting landing area. It is ideal for golf courses and parks.

“ **LUMI naturally digests feces and other organic wastes in the coverage area.**

Digests Animal Feces

LUMI naturally digests feces and other organic wastes left by rodents, wild birds, and other pests, lowering the possibility of transmitting organic materials.

Enriches the Soil

LUMI enhances the biodiversity of the soil in the contact area, increasing the soil's capacity for enrichment and assisting in sequestering nitrogen, phosphorus, and other concentrated nutrients and releasing them slowly to the root system; thereby limiting the amount of nutrient runoff.

Easy and Safe Application

BROADCAST TREATMENT

Use an agricultural pump sprayer or agricultural electrostatic sprayer to apply over the area you wish to protect.

PERIMETER/BARRIER TREATMENT

For perimeter and barrier protection, extend out 25 feet from the nuisance-attracting structure.

COVERAGE

Mix 2 US ounces of LUMI (dry weight) with 5 gallons of water for every 10,860 square feet of coverage area. Apply every four weeks to ensure maximum protection. It is advisable to reapply after significant or frequent rain events.
