

# Whole House Health

## POSITIVE BIOFILM

WAR HAMMER's beneficial microorganisms create a healthier environment by competitively excluding pathogens and forming positive biofilms that inhibit harmful bacteria.

## NO HARSH CHEMICALS

WAR HAMMER enhances poultry health by controlling pathogens, reducing disease incidence and mortality, and breaking down organic matter to maintain a cleaner environment without harsh chemicals.

## ENHANCED EFFICIENCY

Using the all-natural microbes in WAR HAMMER is preferable to chemicals for cleaning poultry houses as they reduce harmful bacteria without chemical residues.

WAR HAMMER is an all-natural microbe powder that enhances poultry house health by introducing beneficial microorganisms, controlling pathogens, and forming protective biofilms.

“ **BIOCELL improves cool cell efficiency by reducing harmful pathogen growth.**

## **Health Hygiene Enhancer**

Composed of a blend of beneficial microorganisms, WAR HAMMER is effective in controlling pathogenic bacteria and improving overall cleanliness. When applied, it is sprayed on all interior surfaces, including walls, water pipes, feeder lines, and curtains, ensuring comprehensive distribution throughout the poultry environment.

## **Pathogen Inhibition Mechanisms**

The beneficial microorganisms in WAR HAMMER operate through several mechanisms to create a healthier environment. They utilize competitive exclusion to occupy niches that would otherwise be available to harmful pathogens, thereby reducing the resources available for their colonization.

Additionally, some of these microbes produce substances like bacteriocins and organic acids, which are toxic to pathogenic bacteria.

Furthermore, these beneficial microbes can form positive biofilms on surfaces, creating a protective barrier that inhibits the colonization of harmful bacteria.

## **Enhance Poultry Health and Sanitation**

The application of WAR HAMMER offers multiple benefits for poultry health and sanitation. It helps control pathogens, reducing the incidence of diseases and improving bird health and mortality rates.

The microorganisms also break down organic matter, such as manure and feed residues, reducing waste buildup and maintaining a cleaner environment.

## **Contributing to Sustainable Practices**

The continuous presence of these beneficial microorganisms, facilitated by the formation of positive biofilms, provides ongoing protection against disease outbreaks. Using WAR HAMMER aligns with environmentally friendly and sustainable farming practices, as it reduces the need for chemical interventions, making it an ecologically responsible choice for poultry health management.

### **KEY BENEFITS**

**ENHANCES POULTRY HEALTH AND HYGIENE**

**CONTROLS PATHOGENS**

**EFFECTIVELY BREAKS DOWN ORGANIC MATTER**

**PROMOTES SUSTAINABLE FARMING**
